

# Caracău-Viadukt Romania

**Hünnebeck Romania used the patented QuikDeck® system in the renovation of an important railway bridge. The QuikDeck® platforms suspended from the viaduct provide a continuous, safe working deck and replace a classic spatial scaffold. This reduces the costs of bridge refurbishment and speeds it up.**

For the comprehensive refurbishment, scheduled to take two years, Hünnebeck Romania planned a tailor-made solution for the access work, supplied all the necessary components (rental material) and, in addition, organized the assembly and dismantling.

On the Romanian construction site, the QuikDeck® access solution offers all trades a safe basis for ergonomic working. Even the inspectors, who as quality assurance officers review and document the execution of the rehabilitation work, always feel safe on the continuous deck.

**Area of expertise:** Infrastructure

**Client:** SCCF Mures

**Project location:** Romania

**Project duration:** 2 years

**Material:** QuikDeck®
