

Parkapartments at Belvedere Vienna

Even extremely complex floor plans can be realized economically by using system formwork. This is proven by the project "Parkapartments Am Belvedere" and "Hotel Andaz Am Belvedere" in the immediate vicinity of Vienna's Belvedere Palace.

Hünnebeck developed a comprehensive formwork concept for the gigantic high-rise construction site, which ensures high cost-effectiveness and high occupational safety. One of the eye-catchers are certainly the five 60 m high towers, which have grown to a height opposite Belvedere Palace according to plans by the renowned Italian architects Renzo Piano Building Workshop: Three of the buildings belong to the residential project "Parkapartments am Belvedere", which comprises 346 high-quality apartments.
